Overview

Volvo has been on an electrification roll recently, which includes the introduction of a new compact EV crossover called the EX60 that's expected to debut sometime in 2026 as a 2027 model. The EX60 will slot into the Volvo lineup alongside the internal-combustion XC60 crossover as its electric-shipping counterpart—similar to the way the new [EX40 electric SUV](#) is a fraternal twin to the gas-powered XC40. While Volvo currently offers a plug-in-hybrid variant of the XC60, the EX60 will be entirely electric. The EX60 will be Volvo's first product built on its next-generation modular SPA3 platform, and the company says that its new generation of battery packs will deliver slightly better efficiency than the outgoing batteries used on Volvo's current production EVs. The EX60 is expected to be Volvo's answer to the [Tesla Model Y](#). It will join the upcoming [EX90 electric sedan](#) as one of five new electric vehicles Volvo plans to launch by the end of the decade.

What's New for 2027?

The EX60 is a new model for Volvo, using the EX prefix the company is reserving for its next-generation EVs. It will be built on the company's upcoming SPA3 product architecture, which it says is its most advanced ever. We expect to see the EX60 at Volvo showrooms starting in 2026 as a 2027 model.
